

ESP32-S3 JC3248W535 Back Door Laser Cutting Template

True 1:1 Scale Printout - DO NOT FIT TO PAGE (Select 'Actual Size' / 100% Scale in Print Dialog)
Compatible with: Creality Falcon 5W Laser Engraver / Cutter (400x415mm Working Area)

CREALITY FALCON 5W - STEP-BY-STEP LASER CUTTING PROCEDURE:

1. Paper Test-Fit: Cut out this template with scissors and lay it directly over your physical door to verify all clearances.
2. Machine Bed Setup: Place the door flat on the honeycomb bed or aluminum slats. Use the Creality multi-level focus block to set laser height to focus.
3. Set Origin (0,0): Position the laser head dot directly over the TOP-LEFT corner of the door plate.
4. Framing Verification: In LightBurn or via offline button (1 click), run the Framing pass. Ensure the laser stays 4mm above the bottom screw bosses.
5. Recommended Cut Parameters: Diode Laser (5W, 450nm) on gold/bronze plastic: Speed 400 mm/min, Power 90%, 4 passes. Use air assist to prevent burning.
